No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                          US-10-797-157-2

WPI; 1999-142935/12. N-PSDB; AAX17786.

Newly isolated or recombinant polynucleotide encoding mammalian cytokine interleukin-B30 (IL-B30), including fragments - useful for regulating activation, development, differentiation and function of various cell types, and for diagnosing and treating conditions associated with IL-B30.

Claim 2; Page 8-9; 83pp; English.

This represents a human cytokine interleukin-B30 (IL-B30) polypeptide. Host cells containing a vector comprising the IL-B30 nucleic acid are used for the recombinant production of the protein. The polynucleotides

```
ö
are useful for diagnosis of IL-B30 mediated conditions, and forensic science (e.g. to distinguish rodent from human, or as a marker to distinguish between different cells exhibiting differential expression or modification patterns). The IL-B30 (including fragments), together with antibodies that bind to IL-B30 are useful for teaching purposes. They are also used for treating conditions associated with abnormal physiology or development, including inflammatory conditions. The polypeptide cytokine should mediate cytokine synthesis and proliferation in cells. IL-B30 is useful for drug screening to identify compounds having binding affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

The present invention describes a composition (I) comprising DNAX

Cytokine receptor subunit I (DCRS1) protein and DNAX soluble receptor

subunit I (BSRS1) protein, which together encode a new mammalian cytokine

related receptor (R), or DCRS1 and interleukin B30 (IL-B30) proteins, or

Creaning for ligands (i.e. agonists/antagonists) from a library of

compounds, which are useful for modulating the physiology or development

Compounds, which are useful for modulating the physiology or development

compounds, which evelopment. (R), annibodies and ligands are useful

for treatment of conditions, especially immunological disorders,

associated with conditions exhibiting abnormal expression of (R). (R) is

useful as a phosphate labeling enzyme to label substrates, and the

subunite BSRS1 and DCRS1 are useful as immunogens for generating

antibodies, or as antigens for binding antibodies. Nucleic acids encoding

CR) are useful for identifying related DNAs and mRNAs, and variants from

other individuals or species. The present sequence represents the

specifically claimed human IL-B30, for use in the composition of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                         This sequence represents human interleukin-B30 (IL-B30). IL-B30 is a novel cytokine, exhibiting significant homology to IL-6 and GCSF (granulocyte collony stimulating factor). Cytokines play a critical role in signalling between immune or other cells during an immune response. The precise role if IL-B30 is not yet known - it is likely to have either a stimulatory or an inhibitory effect on haematopoietic cells such as T-cells, B-cells, natural killer (NK) cells and macrophages. Alternatively, it may affect vascular physiology or development, or have neuronal effects. IL-B30, its fragments IL-B30 nucleotides, agonists and canagonists are useful in the diagnosis and treatment of disorders associated with abnormal expression or activity of IL-B30 e.g., inflammatory or autoimmune disorders. Nucleotides encoding IL-B30 are useful for recombinant expression of IL-B30 in a host cell, and as a customer of probes and primers. The IL-B30 in a host cell, and as a cource of probes and primers. The IL-B30 suches con be used to detect levels of IL-B30 expression in samples from patients suspected of having an inflammatory or autoimmune disorder. IL-B30 nucleotides may also be used to identify homologous genes in other species. IL-B30 corrected or protein or its fragments are useful as antigens for raising antibodies to various linear and conformational epitopes. Such antibodies may be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DEETTNDVPHIQCGDGCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120

the substantially pure polypeptide comprising a number of distinct segments of a ubstantially pure polypeptide comprising a number of distinct segments of a tleast 7 contiguous amino acids from IL-12 p40 and/or IL-830, and a substantially pure polypeptide comprising a segment of at least 1.

Configuous amino acids from IL-12 p40 and/or IL-830, and a configuous amino acids from IL-12 p40 and/or IL-830. The composition is configuous amino acids from IL-12 p40 and/or IL-830. The composition is useful for modulating physiology or development of a cell or tissue in a configuous amino acids from IL-12 p40 and/or IL-830. The composition of Interferon-gamma (FRNgamma), an enhanced Th1 response such as anti-tumour effect, adjuvant effect, anti-viral effect or antagonized allergic configuration of memory T-cells. An agonist is useful inducing the protein is useful for modulating the trafficking or activation of an inflammatory condition, tissue specific autoimmunity, degenerative cutoimmunity, rheumatory condition, tissue specific autoimmunity, degenerative cutoimmunity, rheumatory condition, tissue specific autoimmunity, degeneration an inflammatory condition, tissue specific autoimmunity, and transplant, spinal injury, stroke, neurodegeneration, an cutoimmunity, rheumatory condition, and inflammatory condition, and inflammatory condition, and condition, and configuration of a transplant, spinal injury, stroke, neurodegeneration, an inflammatory condition is useful as an immunogen for the production a disease, is infections disease, postmenopausal osteoporosis or IL-6 associated antisera or antibodies specific for binding immunogen for the production a antisera or antibodies specific for binding
memory T-cell; leukocyte; rheumatoid arthritis; osteoarthritis; atherosclerosis; multiple sclerosis; vasculitis; spinal injury; delayed hypersensitivity; skin graft; transplant; cancer; tumour; stroke; neurodegeneration; ischaemia; postmenopausal osteoporosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DESTINDVPHIQCGDGCCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a binding compound comprising an antibody binding sit which specifically binds to residues 1-168 (mature human interleukin-B30, IL-B30). Also included is a method of making the binding composition, comprising administering to an animal: (a) a substantially pure and isolated polypeptide comprising residues 1-168 of mature human IL-B30; (b) a substantially pure and isolated polypeptide comprising residues 1-156 of mature human isolated polypeptide comprising particle IL-B30. The animal produces the binding compound. The binding compound may be administered to treat disorders associated with haemacopoietic cells, e.g., lymphoid cells, which affect immunological responses, e.g., inflammation and/or development, or neuronal effects. The present sequence represents full-ength human IL-B30
                                              Binding compounds comprising antibodies which bind to Interleukin B30, useful for treating disorders associated with hematopoietic cells, e.g. inflammation and autoimmune diseases and development disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention discloses an isolated antigenic mature polypeptide that is a mammalian cytokine designated interleukin-B30 (IL-B30). The IL-B30 polypeptide is useful for diagnosing or treating (e.g. protein therapy) conditions associated with abnormal physiology or development (e.g. inflammatory conditions or autoimmune disorders), or in regulating the activation, development, differentiation and function of haematopoietic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New interleukin-B30 (IL-B30) polypeptide, useful for diagnosing or treating e.g. inflammatory conditions or autoimmune disorders, or in regulating the development of hematopoietic cells or lymphoid cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                           22. 189

cells or lymphoid cells. The IL-B30 polypeptide is also useful as an immunogen for producing antisera or antibodies specific for binding. The sequence presented is the human IL-B30 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Composition comprising fragments from interleukin (IL)-12 p40 and IL-B30 polypeptides is useful to enhance anti-viral, anti-tumor and vaccine effects and to antagonize allergic responses.
                                                                                                                                                                                                                                                                                                                                                                                     interleukin B30; IL-B30; IL-12 p40; tumour necrosis factor alpha;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a composition comprising polypeptide fragments from interleukin (II)-12 p40 and IL-B30 is new. The fragments comprise or 11 contiguous amino acids. Also included are an isolated or recombinant nucleic acid (NI) encoding the polypeptides of the novel

composition, a cell comprising recombinant N1, a nucleic acid which hybridises the natural coding portion of primate IL-12 p40 and primate IC-30, an antagonist of IL-12 p40/IL-B30 (combined with a tumour necrosis factor (TNF) alpha antagonist, an IL-12 antagonist, IL-10 or steroids), a binding compound comprising an antigen binding site from an antibody which specifically binds to the novel composition, producing of acell or tissue (comprising contacting the cell with the claimed composition to increase production of IFN-alpha, modulating physiology or development of a cell in a host organism (comprising administering the novel composition which results in an anti-tumour, adjuvant, anti-viral or antagonised allergic effect), administering the IL-12 p40/IL-B30 antagonist resulting condition, increasing secretion of a primate IL-B30 (comprising expressing IL-12 p40 with IL-B30, secretion of IL-12 p40 comprising expressing IL-12 p40 with IL-B30, secretion of IL-12 p40 comprising expressing IL-B30 with IL-B30, secretion of IL-12 p40 administering IL-B30 or its agonist. The invention is useful in an animal and inducing the proliferation of memory T-cells by comprising the comprising conditions as associated with abnormal physiology including inflammatory conditions associated with abnormal physiology including inflammatory conditions as associated with abnormal physiology including inflammatory conditions or sociated responses and teaching IL-B30 including inflammatory anti-viral and vaccine responses and teaching IL-B30 including inflammatory conditions or susful to treat autoimmune diseases such as multiple sclerosis or psoriasis or chronic inflammatory souditions such as rheumatoid arthritis proper and pagentic associated sequence represents human IL-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DESTINDVPHIQCGDGCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                    The invention relates to a novel method for treating or improving wound healing. The method comprises administering to a subject an agonist or antagonist of interlewin (IL)-23. The invention further comprises: an agonist of IL-23 derived from the binding site of an antibody that specifically binds to an IL-23 receptor; and a kit comprising the agonist and a compartment or instructions for use or disposal. The interleukin-23 agents have vulnerary activity. The method is useful for treating or improving wound healing. This sequence represents a cytokine human interleukin-19 protein used in the wound healing method of the invention.
                                                                                                                                                               Treating inflammatory skin disorders or improving wound healing comprises administering to a subject an agonist or antagonist of Interleukin-23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            DEETTNDVPHIQCGDGCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120

This sequence represents human interleukin 23 subunit p19 (IL-23p19). The method of the invention for modulating turnour growth comprises contacting a tumour cell with an agonist or antagonist is a binding composition which specifically binds the IL-23 catagonist is a binding composition which specifically binds the IL-23 agonist or antagonist may be used for diagnosing or treating a subject suffering from a cancer or tumour. The binding ormposition comprises an antigen-binding site of the antibody, an extracellular region of IL-23R, antigen-binding site of the antibody, an extracellular region of IL-23R, (siRNA), or a detectable label. The binding composition comprises a polyclonal antibody a monoclonal antibody, a humanized antibody or its fragment, a Fab. Fv. F(ab') 2 fragment, or a peptide mimetic of an antibody. The tumour cell is a colon, ovarian or breast cancer cell, or melanoma cell. In the treatment method, the antagonist of IL-23 inhibits cancer or tumour is of the gastrointestinal tract, respiratory tract, reproductive system or endocrine system. In diagnosing cancer or tumour, cancer or tumour is of the gastrointestinal tract, respiratory tract, the binding composition comprises a nucleic acid probe or primer that specifically binds or hybridises to human or mouse IL-23p19 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 DEETTNDVPHIQCGDGCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            VAQLHASLLGLSQLLQPEGHHWETQQIPSLSPSQPWQRLLLRFKILRSLQAFVAVAARVF 180

The present invention relates to a method of treating a human subject experiencing a physiological disorder. The method involves administering an agonist or antagonist of DNAX cytokine receptor subunit 5 (DCRS5, also known as IL-23R) or of pl9, where the disorder comprises asthma or allergy, chronic obstructive pulmonary disorder (COPD) or an interstitial lung disorder. The invention is useful for treating interstitial lung disorder e.g. idiopathic pulmonary fibrosis, eosinophilic granuloma and hypersensitivity pneumonitis. The present sequence is the human pl9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DEETTNDVPHIQCGDGCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of detecting (MI) a polynucleotide, by contacting a polynucleotide with a probe (PB) that hybridizes, under stringent wash conditions to at least 394 or 25 contiguous nucleotides of open reading frame of a fully defined interleukin (IL)-B30 sequence of 570 (S1) or 1203 (S2) base pairs, to form duplex, where detection of duplex indicates presence of polynucleotide. The method is useful for detecting IL-B30 polynucleotide, and for detecting levels of IL-B30 polynucleotide, and for detecting levels of IL-B30 in samples from patient suspected of having abnormal conditions such as inflammatory or autoimmune. The method is also useful in forensic science, e.g. to distinguish rodent from human or to distinguish between different cell exhibiting differential expression or modification content of associated with abnormal expression or signaling by IL-B30. This sequence corresponds to the novel interleukin-B30 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VAQLHASLLGLSQLLQPEGHHWETQQIPSLSPSQPWQRLLLRFKTLRSLQAFVAVAARVF 180

The invention relates to a novel method for treating or improving wound healing. The method comprises administering to a subject an agonist or antagonist of interleukin (IL)-23. The invention further comprises: an agonist of IL-23 derived from the binding site of an antibody that specifically binds to an IL-23 receptor; and a kit comprising the agonist and a compartment or instructions for use or disposal. The interleukin-23 agents have vulnerary activity. The method is useful for treating or improving wound healing. This sequence represents a hyperkine protein used in the wound healing method of the invention.
Treating inflammatory skin disorders or improving wound healing comprises administering to a subject an agonist or antagonist of Interleukin-23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  80 QGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSPVAQLHASLLGLSQLLQPEG 139

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to recombinant polynucleotide encoding an antiganic interleukin-B30 (IL-B30). The polynucleotides are useful for detecting, isolating, or identifying a DNA clone encoding IL-B30 e.g. from a natural source, particularly for isolating a gene from mammal. The proteins are useful for generating antibodies and for screening drugs. The invention is also useful for diagnostic applications for IL-B30 mediated conditions such as inflammatory conditions and for cell differentiation. The invention is also useful in gene therapy. The present sequence is the human ILB-30 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 DEETTINDVPHIQCGDGCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120

This sequence represents human interleukin 23 (IL-23) hyperkine. The method of the invention for modulating tumour growth comprises contacting a tumour cell with an agonist or antagonist of IL-23. The agonist or antagonist is a binding composition which specifically binds the IL-23 p19 subunit (IL-23p19) or the interleukin 23 receptor (IL-23R) protein. The identified agonist or antagonist may be used for diagnosing or treating a subject suffering from a cancer or tumour. The binding or treating a subject suffering from a cancer or tumour. The binding composition comprises an antigen-binding site of the antibody, an extracellular region of IL-23R, a small molecule, an antisense nucleic acid or small interference RNA (sirkNa), or a detectable label. The binding composition comprises a polyclonal antibody, a monoclonal cantibody, a humanized antibody or its fragment, or a peptide mimetic of an antibody. The tumour cell is a colon, ovarian or breast cancer cell, or melanoma cell. In the treatment cachexia, anorexia or angiogenesis. The cancer or tumour, is of the gastrointestinal tract, respiratory tract, reproductive system or cachexia, anorexia or angiogenesis. The cancer or tumour is of the endocrine system. In diagnosing cancer or tumour, the binding composition comprises a nucleic acid probe or primer that specifically binds or hybridises to human or mouse IL-23p19 cDNA sequences, or the human IL-23R
                                                                                                                                                                                                                 agonist, antagonist, receptor, cancer, antigen-binding site, antibody, extracellular region, antisense nucleic acid, small interference RNA, siRNA; polyclonal, monoclonal, humanized, Fab, Fv; F(ab')2, peptide mimetic, colon, ovarian, breast, melanoma; cachexia, anorexia, angiogenesis, gastrointestinal tract, respiratory tract; reproductive system, endocrine system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          growth, useful for treating a subject suffering from comprises contacting a tumor cell with an agonist or

to AXY94980, isolated from human adult brain, adult thyroid, adult retina, foetal carcinoma, adult blood, adult neural, foetal kidney, adult placenta, adult tessis, whole embryo, adult cartilage, kidney, foetal brain, adult thymus, foetal placenta, adult tucrus, adult tumour, adult placenta, the polynuclectides adult tumour, adult bladder, cDNA libraries The polynuclectides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or amellorating medical conditions in humans and animals. The polynuclectides can be used as markers for tissues in which the protein is preferentially expressed, as molecular weight markers on Southern gels, and as chromosome markers or tags to identify chromosomes or to map gene positions. The proteins can be used in the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAA16618 to AAA16697 encode the human secreted proteins given in AAY94898
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotides encoding secreted proteins, which may have e.g. untritional, chemokine, immune stimulating or suppressing, hematopoiesis regulating, tissue growth, activin/inhibin antiinflammatory or tumor inhibition activity.

Protean Site-specific detection and structural characterization of the glycosylation of A; Title: Site-specific detection and structural characterization of the glycosylation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A; Contents: annotation, N-glycosylation
C; Comment: ApoD occurs in the macromolecular complex with lecithin-cholesterol acyltrane
C; Comment: ApoD is primarily localized in HDL (60-65%), with most of the remainder in VI
C; Comment: ApoD has been found in liver, intestine, pancreas, kidney, placenta, adrenal,

05-JUL-2004, sequence version 1.
07-FEB-2006, entry version 8.
Interleukin-23 pl9 subunit.
Name-IL-23 pl9 subunit.
Cavia porcellus (Guinea pig).
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Buarchontoglires; Glires; Rodentia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN-Hartley;
